Research Associate in Psychiatry
McLean Hospital and Harvard Medical School
Research Health Scientist
VA Medical Center, Bedford, Massachusetts

“Integrating Phenomenology, Chronobiology and Ignatian Spirituality for exploring time-processing disturbances in first-psychotic episodes: a pilot study”
LEARNING OBJECTIVES

Paola Salvatore: “Integrating Phenomenology, Chronobiology and Ignatian Spirituality for exploring time-processing disturbances in first-psychotic episodes: a pilot study”

1) Conceptualization and definition of subjective experiences of self-consciousness and their significance in differentiating core psychopathological structures and hierarchical trajectories in the psychotic transformation of consciousness.

2) Conceptualization and definition of subjective experiences of time-processing disturbances and their correlates with nuclear dimensions of psychopathology and chronobiological actigraphic measures in affective versus nonaffective first lifetime psychoses.

3) Presentation of a pilot study on the experimental integration of phenomenology of subjective experiences, Chronobiology and actigraphy, and Ignatian Spirituality in identifying and addressing inner-time disturbances during first-psychotic episodes.

Department of Psychiatry Rounds
are supported by education grants from the following companies:

Janssen, Inc.
Lundbeck
Otsuka
Sunovion
Purdue Pharma
Shire

Thank you for your continued support!
